Green, Glen

Grand, Douglas

A small, dark, irregularly shaped object, possibly a piece of debris or a small sculpture, resting on a light-colored surface. The object has a complex, somewhat organic form with several protrusions and indentations. It is positioned in the center of the frame, slightly above the middle. The background is a light, textured surface, possibly a piece of paper or a wall, with some faint, illegible markings and a few small dark spots. The overall image is in black and white, with high contrast between the dark object and the light background.

THE UNIVERSITY OF CHICAGO PRESS

11/21/19

1. *Chlorophyll a* (Chl a) and *Chlorophyll b* (Chl b) are the two main photosynthetic pigments in green plants. They are responsible for capturing light energy and converting it into chemical energy through the process of photosynthesis. Chl a is the primary pigment, while Chl b acts as an accessory pigment, transferring energy to Chl a.
